This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- 1. (Currently Amended) A high-frequency current suppressor comprising a flexible member capable of being attached to a cable, which is consisting of composite magnetic material selected from material groups as follows:
- (a) the material which comprises soft magnetic powder obtained by flattening alloy powder including at least Fe, Si, Al, and binding material;
- (b) the material which comprises soft magnetic powder obtained by flattening alloy powder including at least Ni, Fe, and binding material; and
- (c) the magnetic loss thin film which comprises a first member consisting of at least any one of Fe, Co, Ni, or mixture thereof and a second member consisting of insulating material including at least more than one kind of element other than said Fe, Co, Ni.

- 2. (Original) A high-frequency current suppressor as claimed in claim 1, wherein said flexible member comprises a break which elongates over all length along an axial direction of said cable.
- 3. (Original) A high-frequency current suppressor as claimed in claim 1, wherein said high-frequency current suppressor comprises at least two layers which consist of a high-frequency current suppressing layer and at least one outer layer.
- 4. (Original) A high-frequency current suppressor as claimed in claim 3, wherein said outer layer is consisting of either a molded resin or a molded metal, or combination of said molded resin and said molded metal.
- 5. (Currently Amended) A high-frequency current suppressor as claimed in any one of claims 1 through 4, wherein said high-frequency current suppressor comprises composite magnetic material which comprises soft magnetic powder obtained by flattening alloy powder including at [[25]] least Fe, Si, Al, and binding material.

- 6. (Previously Presented) A high-frequency current suppressor as claimed in any one of claims 1 through 4, wherein said high-frequency current suppressor comprises composite magnetic material which comprises soft magnetic powder obtained by flattening alloy powder including at least Ni, Fe, and binding material.
- 7. (Previously Presented) A high-frequency current suppressor as claimed in any one of claims 1 through 4, wherein said high-frequency current suppressor comprises magnetic loss thin film which includes a first member comprising at least any one of Fe, Co, Ni, or mixture thereof and a second member comprising insulating material including at least more than one kinds of elements other than said Fe, Co, Ni.
- 8. (Previously Presented) An earphone system for use in a terminal of mobile communication, wherein said earphone system is provided with said high-frequency current suppressor as claimed in any one of claims 1 through 4.

- 9. (Currently Amended) An earphone system comprising a connection plug connected to an output terminal of an electronic equipment, an earphone, and a signal cable for connecting said connection plug with said earphone, wherein a high-frequency current suppressor comprising consisting of soft magnetic material is added at least partially to any one of said connection plug, said earphone, and said signal cable, which is consisting of composite magnetic material selected from material groups as follows:
- (a) the material which comprises soft magnetic powder obtained by flattening alloy powder including at least Fe, Si, Al, and binding material;
- (b) the material which comprises soft magnetic powder obtained by flattening alloy powder including at least Ni, Fe, and binding material; and
- (c) the magnetic loss thin film which comprises a first member consisting of at least any one of Fe, Co, Ni, or mixture thereof and a second member consisting of insulating material including at least more than one kind of element other than said Fe, Co, Ni.

- 10. (Original) An earphone system as claimed in claim 9, wherein a part or a whole of outer circumference of said signal cable is covered by said high-frequency current suppressor.
- 11. (Original) An earphone system as claimed in claim 9 or 10, wherein a part or a whole of outer circumference of an outer conductor of said signal cable is covered by said high-frequency current suppressor.
- 12. (Previously Presented) An earphone system as claimed in claims 9 or 10, wherein said high-frequency current suppressor is provided near a portion where said signal cable and said earphone are connected to each other.
- 13. (Previously Presented) An earphone system as claimed in claims 9 or 10, wherein said high-frequency current suppressor is included inside said earphone.
- 14. (Previously Presented) An earphone system as claimed in claims 9 or 10, wherein said earphone system further comprises a microphone.

- 15. (Original) An earphone system as claimed in claim 14, wherein said high-frequency current suppressor is included inside said microphone.
- 16. (Previously Presented) An earphone system as claimed in claims 9 or 10, wherein a housing of said earphone or said microphone is formed by said high-frequency current suppressor.
- 17. (Previously Presented) An earphone system as claimed in claims 9 or 10, wherein said high-frequency current suppressor comprises composite magnetic material which comprises soft magnetic powder obtained by flattening alloy powder including at least Fe, Si, Al, and binding material.
- 18. (Previously Presented) An earphone system as claimed in claims 9 or 10, wherein said high-frequency current suppressor comprises composite magnetic material which comprises soft magnetic powder obtained by flattening alloy powder including at least Ni, Fe, and binding material.

19. (Previously Presented) An earphone system as claimed in claims 9 or 10, wherein said high-frequency current suppressor comprises magnetic loss thin film which comprises a first member including at least any one of Fe, Co, Ni, or mixture thereof and a second member including insulating material including at least more than one kinds of elements other than said Fe, Co, Ni.
